a. Lo-fi Prototype:

- I started by sketching the wireframe for the shopping cart page for Muddy Paws. Taking inspiration from common e-commerce platforms (like Chewy.com, Amazon.com), and adhering to the 'Process Funnel' design pattern - I came up with a simple webpage.

- I wanted to use a number counter as input for the "Quantity" feature for each element in the cart.
- The "Delete" button is on the left with the waste bin icon acting as feedforward for the user to indicate that clicking on it will make the item disappear from the cart.
- The "Checkout" button is the only main CTA on this page, which will lead the user to the payment gateway.
